

Staff Registration

Project Overview

This project is a flutter application for staff registration which including splashscreen, login and signup, home page that contains a registration form and displaying a list of registered staff members.

main.dart

Purpose

This Flutter app initializes Firebase and manages themes using the provider package. It displays a splash screen on startup and dynamically switches between light and dark themes.

Dependencies

- firebase_core: For Firebase initialization.
- provider: For state management.
- flutter/material.dart: Core Flutter widgets.

Usage

- **Firestore Setup:** Replace FirebaseOptions with your Firebase project credentials.
- **Theme Customization:** Modify Styles.themeData in my_theme.dart.
- **Splash Screen:** Customize Splash Screen in splash_screen.dart.

splash_screen.dart.

It provides a visual introduction to the application with an animated graphic and a descriptive text. It is used to provide an introductory experience before navigating to the main content of the app.

✓ **Lottie Animation**

- Displays an animation using the Lottie package, which is centered on the screen. The animation file is referenced from the local assets.

✓ **Title Text**

- Displays the text "Staff Registration" beneath the animation, styled with a font size of 24, a font weight of 400, and a color of blue accent.

login_signup.dart

✓ **State Management:**

- The application uses the `StatefulWidget` to manage the state for toggling between login and signup modes, form validation, and loading indicators.

✓ **Form Fields:**

- **Login Form:** Includes email and password fields with validation checks.

- **Signup Form:** Includes email, password, and confirm password fields with validation, and a checkbox for agreeing to terms and conditions.
- ✓ **Controllers:** `TextEditingController` instances are used for managing the text input for email, password, and username fields.
- ✓ **Validation:** Custom validation logic ensures that emails are in the correct format and passwords meet length and matching criteria.
- ✓ **Firebase Integration: FirebaseAuth:** Used for authenticating users.
- ✓ **User Experience Enhancements:**
 - **Loading Indicators:** Shows a loading spinner while the authentication process is in progress.
 - **Feedback Mechanisms:** Uses `Fluttertoast` to provide feedback on errors during authentication, such as incorrect credentials or network issues.
- ✓ **AwesomeDialog for Information:** A pop-up dialog provides additional information or terms and conditions, enhancing.

home.dart

It represents the main screen of the staff portal application. It provides various functionalities, including navigation to different screens, displaying a list of registered staff, and a logout option.

Widgets:

- ✓ **Scaffold:**
 - **body:** Contains the main content of the screen, including a list of options and the latest registered staff members.
 - **floatingActionButton:** A button to toggle the drawer.
- ✓ **CustomMorphism:** A custom widget used for styling different UI components with morphism design.
- ✓ **RegistrationForm:** Navigates to the registration form for new staff.
- ✓ **StaffList :** Navigates to the list of staff members.
- ✓ **CarouselSlider: Displays registered staff in a carousel.**
- ✓ **FloatingActionButton: Opens the navigation drawer.**
- ✓ **Firestoreservices:** to fetch the latest registered staff members from Firestore and displays them in a CarouselSlider.
- ✓ **_popup_details:** Displays detailed information about a staff member in a custom dialog when their name is double-tapped.
- ✓ **Dependencies:**
 - awesome_dialog, cloud_firestore, firebase_auth, flutter/material.dart, slide_to_act, carousel_slider, provider
 - Custom widgets: CustomMorphism, DrawerNav, RegistrationForm, StaffList.

profile_box.dart

✓ Properties

- **mainText** (String): The main text to be displayed in the box.
- **subText** (String): The subtext to be displayed below the main text.
- **onPressed** (void Function()?): Optional callback function for the edit button.

✓ Styling

- **BoxDecoration:**
 - **Background color:** Theme.of(context).colorScheme.secondary
 - **Box shadows:** Two shadows with different colors and offsets
 - **Border radius:** 30
- **Text:**
 - **Main text color:** Theme.of(context).colorScheme.primary
 - **Subtext color:** Theme.of(context).colorScheme.primary
- **Container:**
 - Additional white line separator below each box

profile_page.dart

✓ Methods:

- **build:** Builds the widget tree.
- **Myprofile:** Returns a ListView of profile details.
- **editProfile:** Opens a dialog to edit a profile field and updates Firestore.

✓ Widgets

- **AppBar:** Displays the title "Profile" and a back button.
- **CustomMorphisum:** Custom widget for a morphism effect.
- **ListView:** Displays profile details in a scrollable list.
- **ProfileBox:** Custom widget for displaying and editing profile fields.
- **Icon:** Displays an icon at the top of the profile details.
- **AlertDialog:** Dialog for editing profile fields.
- **TextField:** Input field for entering new profile information.
- **TextButton:** Buttons for saving or cancelling the edit operation.

registration_form.dart

It collects detailed personal and professional information. The form data is validated and submitted to a Firestore database.

✓ UI Layout:

- The main screen features an AppBar with the title "Registration Form" and a back button.
- A custom glass effect (**CustomGlassEffect**) is applied to form elements, providing a modern and sleek look.

✓ Form Structure:

- **Personal Information:** First name, last name, date of birth, gender, present and permanent addresses.
- **Professional Information:** Subject, college, educational qualifications, years of experience.
- **Contact Information:** Email and mobile number.
- ✓ **Input Validation:**
 - Each field has validation rules to ensure proper data entry.
 - Fields like email and mobile number have specific patterns for validation.
 - A gender selection field is included, with radio buttons for Male, Female, and Other.
- ✓ **Date Picker:**
 - A date picker widget is used to select the date of birth, ensuring consistent date formatting.
- ✓ **Submission Process:**
 - Upon form submission, the data is validated. If valid, a confirmation dialog (using `AwesomeDialog`) appears, asking for confirmation.
 - After confirmation, the data is sent to the Firestore database via a service class (`Firestoreservices`).
- ✓ **User Experience:**
 - The form uses clear labels and hints to guide users in filling out the fields.
 - Input fields are designed to handle appropriate input types, such as multiline for addresses and numeric for mobile numbers.

stafflist.dart

Users can view detailed information about each staff member and search for specific staff members by name.

- ✓ **AppBar:**
 - Transparent background.
 - Contains a title "Staff List".
 - Back button to navigate to the previous screen.
- ✓ **StreamBuilder:**
 - Listens to real-time updates from Firestore.
 - Displays a list of staff members if data is available.
 - Shows a "NO DATA FOUND" message if no data is available.
 - Shows a `CircularProgressIndicator` while loading data.
- ✓ **ListView:**
 - Creates a list of staff members using data from Firestore.
 - A custom widget used to create a glassmorphism effect for the list items and detailed views.
 - Each staff member is displayed using a `ListTile` inside a `CustomMorphisum`.
- ✓ **ListTile:**

- Displays staff member's name, subject, and an icon to view more details.
- On pressing the trailing icon, a bottom sheet with detailed information is shown.

✓ **_bottompopup:**

- Displays detailed information about a staff member in a modal bottom sheet.
- Information includes name, subject, age, sex, education, experience, mobile number, email, and address.
- Uses a RichText widget to display the information in a formatted manner.

✓ **_showSex:**

- Returns an icon based on the sex of the staff member.

✓ **Dependencies**

- **cloud_firestore:** For interacting with Firestore.
- **flutter_animate:** For adding animations.
- **custom_morphisum.dart:** Custom UI component.
- **fire_store.dart:** Firestore service for data fetching.
